Move. Explore. Achieve.

Open Air / a complete identity for MURY fitness and activity experiences.

A softer everyday-fitness identity, with baby blue, confident blood red and clear typography. Use this pack across the application, its activity stories and its public presentation.

ASSET PRODUCTION V1.3 / LOGOS / APP / SOCIAL / STORE / HANDOFF

An identity built around movement.

Independent from other fitness brands; confident without aggression, expressive without clutter.

For everyday explorers

Runners, walkers and cyclists who value progress, beautiful routes and sharing their experience. Start with the iPhone experience while keeping the visual language portable.

The positioning

MURY turns everyday movement into something worth remembering. Track, understand and share are the product ambition; release copy must follow what the app actually supports.

Personality

Energetic, free, elegant, confident, modern and encouraging. Celebrate personal achievement without judgement, pressure or invented records.

Brand promise

Make progress clear and stories personal. The brand can feel premium without making essential controls harder to find.

One logo, a useful family.

The smooth route-and-pin symbol and Rubik wordmark remain the anchor across all applications.

Primary: red symbol with charcoal wordmark on light surfaces. Dark: blue symbol with white wordmark. Single-colour red, white and black options are supplied. The tagline lockup is optional when space permits.

Clear space and small-scale use.

Preserve the route shape, its open stroke and pin counter. Do not redraw or change proportions.

Clear space = 0.5H

H is the visible symbol height. Keep at least half that height around a standalone symbol or the complete lockup. Containers for app icons and favicons use their own documented padding.

Minimums

Digital: 24 px symbol preferred; 16 px favicon only. Horizontal logo 160 px; tagline lockup 280 px. Print: 8 mm symbol, 40 mm horizontal, 70 mm tagline. Check the actual output.

Keep the master SVG files. Avoid stretching, rotating, adding glow or using the functional activity icons as substitute logos.

Baby blue. Blood red. Clear roles.

Exact digital masters use sRGB. Soft White and Charcoal support structure and readability.

BLUE

#A7D8F3 / RGB 167,216,243

CMYK approx. 31,11,0,5

RED

#B20E1C / RGB 178,14,28

CMYK approx. 0,92,84,30

SURFACE

#F9FAFB / RGB 249,250,251

CMYK approx. 1,0,0,2

CHARCOAL

#1F2937 / RGB 31,41,55

CMYK approx. 44,25,0,78

MUTED

#566475 / RGB 86,100,117

CMYK approx. 26,15,0,54

CONTROL-BORDER

#64748B / RGB 100,116,139

CMYK approx. 28,17,0,45

CMYK is unprofiled approximation; request a printer proof. No Pantone equivalence is claimed.

Contrast is part of the identity.

Use colour combinations deliberately; brand red is not automatically suitable on every surface.

Aa

Red on baby blue

Dark control border

5.72:1 / normal text AA

Red on charcoal is only 2.08:1. Selected dark navigation uses blue. Flat map routes use a pale casing; cinematic replay has a white core and red glow. Text and controls carry labels. Never imply saved, paused or completed state by colour alone.

Rubik, consistently applied.

Regular 400, SemiBold 600 and Bold 700 are the working range. Native controls can use the system font.

Move. Explore. Achieve.

Morning Run

A route worth remembering.

Body 16/24; labels 14/20; short captions 12/18. Screen titles 28/36; live metrics 48/56. Support native text scaling. Use tabular or monospaced digits and explicit units for distance, pace, time and elevation.

12.4 km / 1:08:32 / 5:32 /km

LICENSED RUBIK FILES + SIL OFL INCLUDED / SF PRO NOT REDISTRIBUTED

Components that remain easy to use.

Button, focus, disabled, loading, metric and route specifications are supplied as editable SVG and tokens.

Primary

Start recording

Dark primary

Start recording

Disabled

Start recording

Interaction

Minimum 44 × 44 target; primary button 52 px high; radius 16 px. Focus ring 2 px with 3 px offset. Keep a stable label during loading; retain context if an action fails.

Information hierarchy

One primary action per screen. Prioritise live recording controls and metrics. Cards use a 20 px radius; row separators are usually enough for lists. Do not nest cards just to group content.

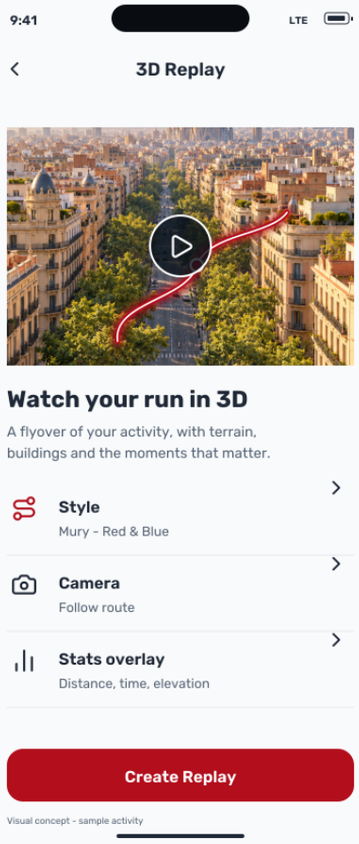

Open 05-App-design-system/mury-ui-components.svg for the complete component sheet.

From activity to a story worth sharing.

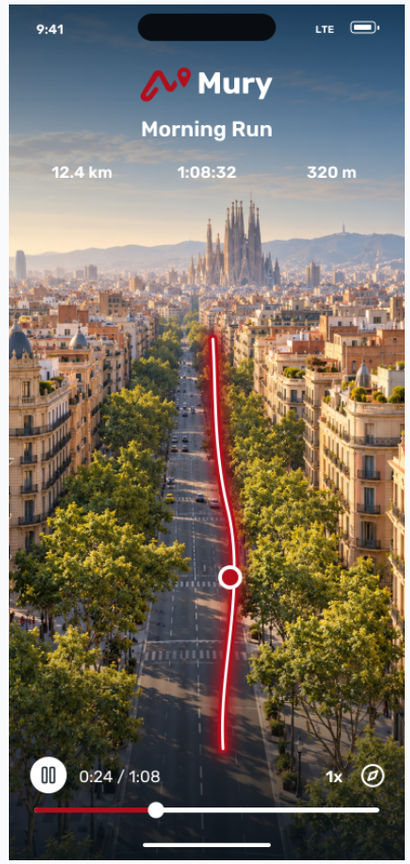

Brand application concepts only; no working GPS or replay capability is demonstrated here.

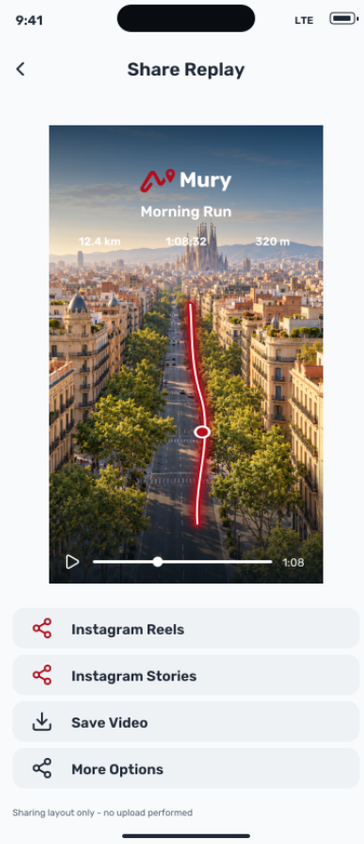

ACTIVITY

REPLAY SETUP

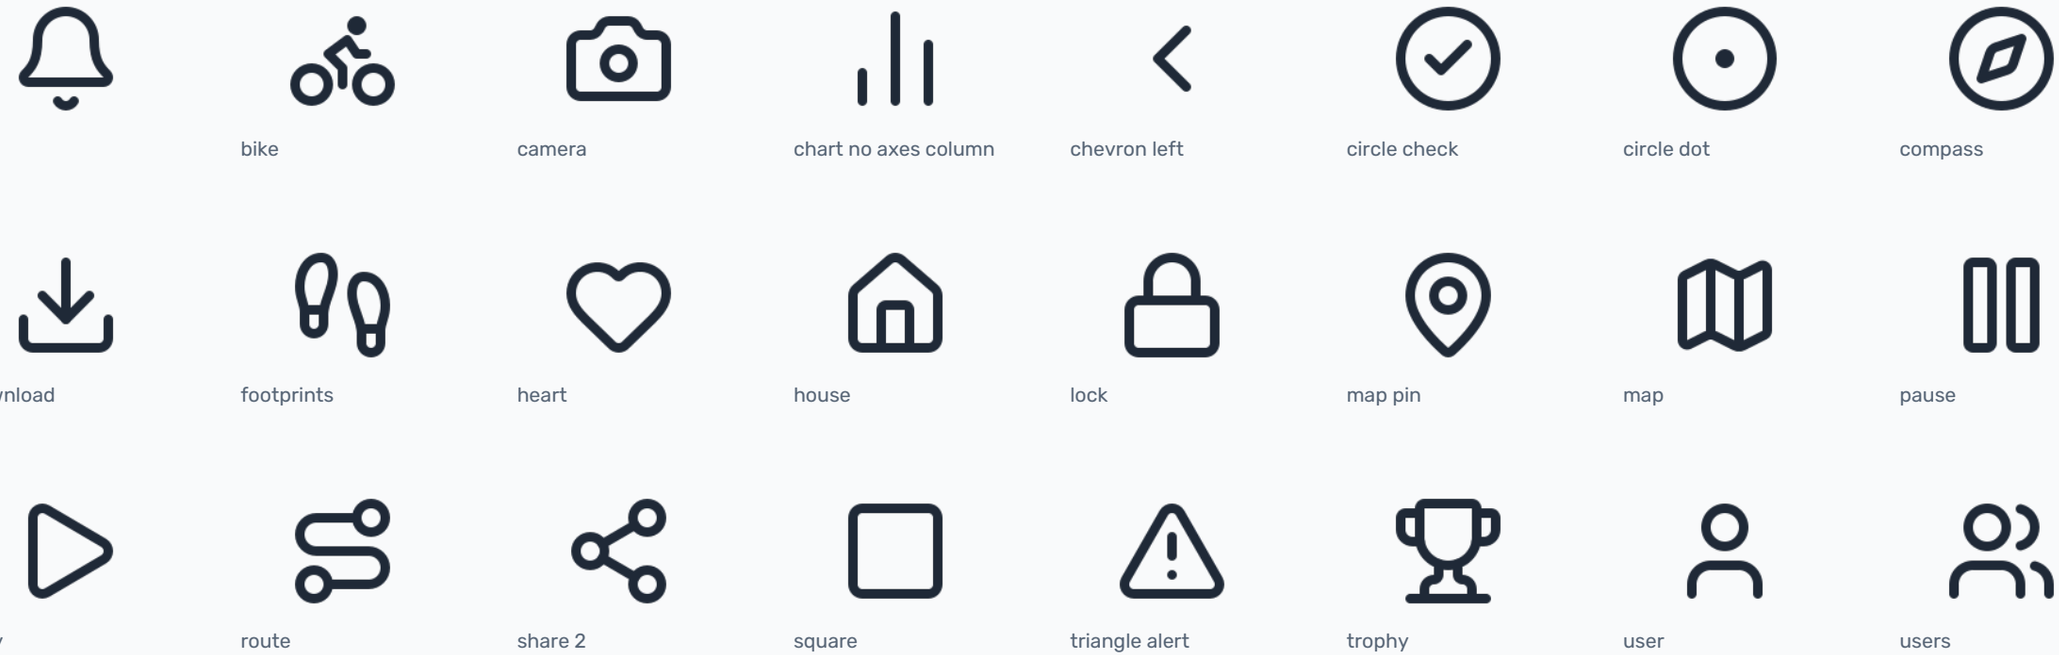

IMMERSIVE REPLAY

SHARE

Functional icons stay functional.

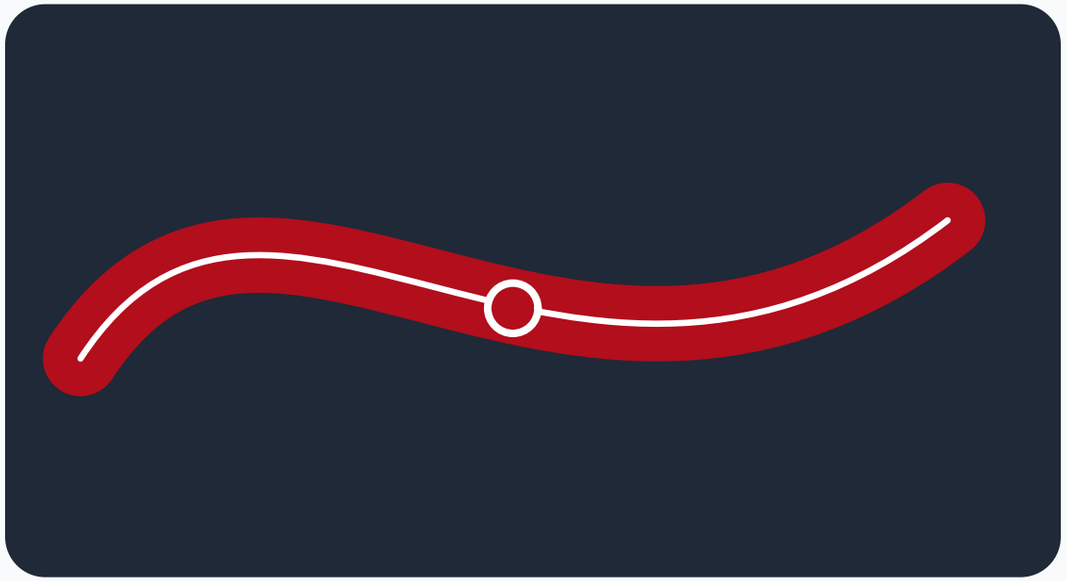

Lucide icons use a consistent 24-unit grid; the MURY mark stays reserved for brand identity.

Use charcoal on light backgrounds, white for dark controls and blue for active dark navigation. Red active icons belong on a sufficiently light surface. Keep the bundled Lucide/Feather licence with redistributed icon files.

The route is a signature element.

Cinematic replay follows the mockup: a white core inside a blood-red band and soft red glow.

Designed layers

Cinematic: soft red glow, red band, narrow white core; red progress dot with white border. This restores the supplied mockup. Flat 2D maps retain red strokes with white casing. The two treatments are intentionally distinct.

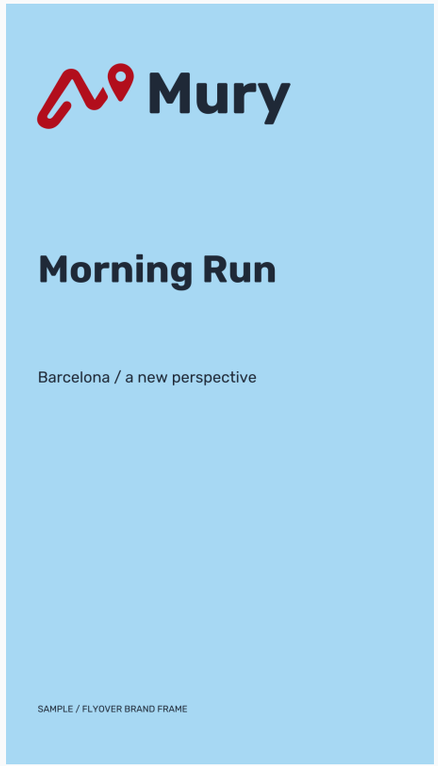

No map provider selected

The supplied city illustration and route curves are concept assets. They are not evidence of GPS accuracy, real building geometry, a licensed map integration or working camera animation.

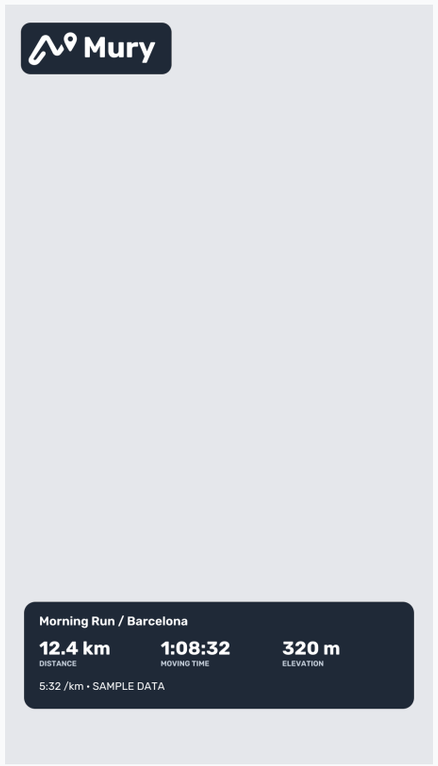

Keep activity data and units legible; avoid using route glow as the only source of contrast.

A recognisable Flyover story.

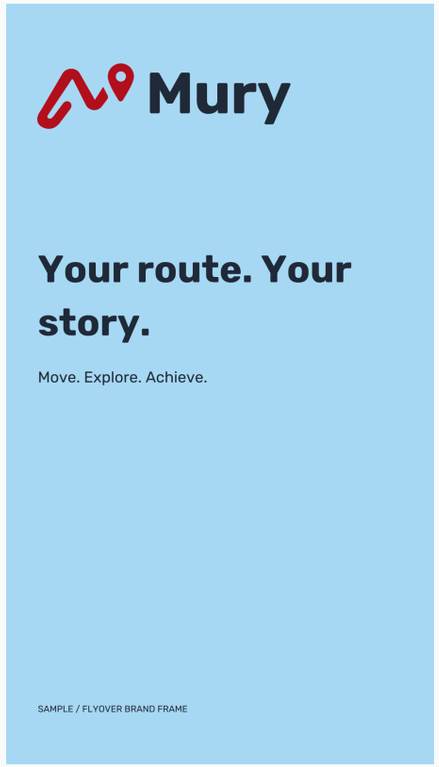

Title, end frame and transparent metrics overlay keep the identity consistent in a video workflow.

TITLE FRAME

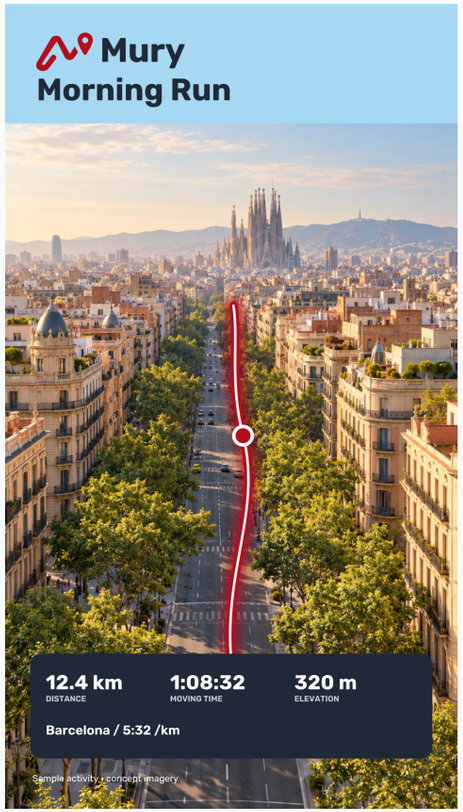

TRANSPARENT OVERLAY

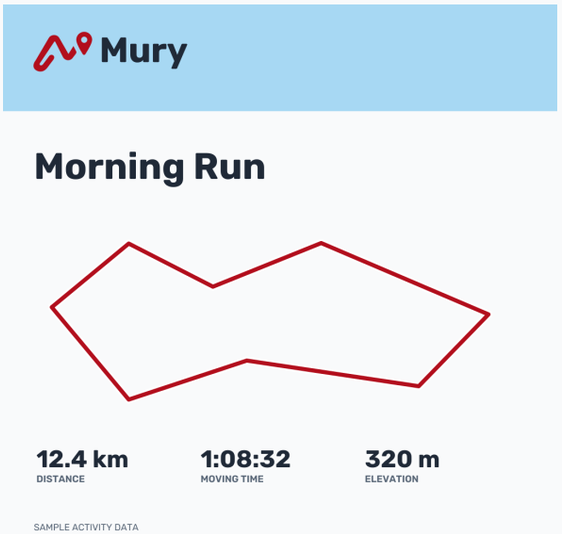

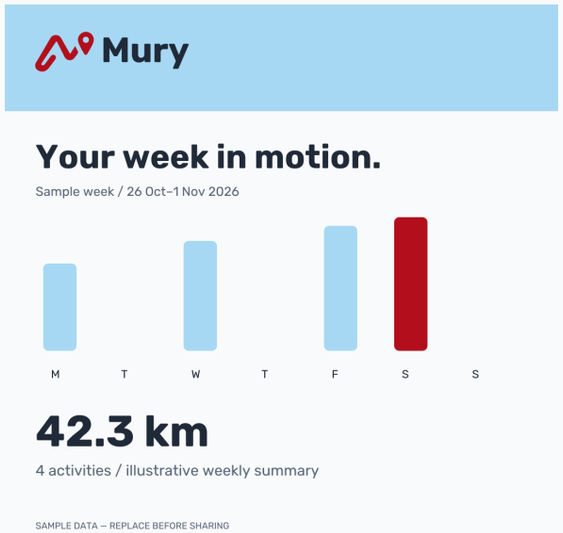

END FRAME

Made for sharing, without losing identity.

Stories, Reels, activity cards, achievements, personal bests and weekly summaries are editable templates.

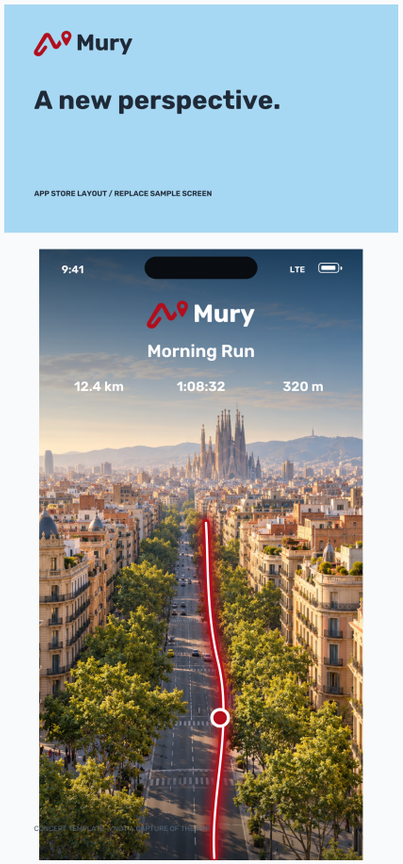

Replace every sample metric, name and result before publishing. Keep key information away from platform controls. The safe-area guide is an editorial aid; preview the crop in the destination platform.

A clear App Store presentation.

The supplied layout exports are correctly sized design templates; they require verified app screenshots.

Two iPhone size families

1206 × 2622 for the medium Dynamic Island family and 1320 × 2868 for the large family. Sizes were checked against Apple App Store Connect on 1 November 2026.

Replace the sample screen

The named screenshot group contains a static brand specimen. Use a verified current app screenshot and release-accurate copy before removing the visible concept label or submitting.

See the App Store folder README for the official Apple source and replacement instructions.

Icons that travel across platforms.

Default, dark and tinted layer inputs accompany the flat masters and native resource examples.

iOS and web

1024 px RGB marketing master; iPhone/iPad AppIcon catalog; separate background/foreground inputs for Icon Composer; favicon, Apple touch and PWA resources.

Future distribution

Android adaptive vector/background and density PNGs, Windows ICO and macOS ICNS are included. Import and validate with the relevant platform toolchain; no store submission is implied.

Leave square masters unrounded; masking belongs to the operating system. No proprietary Icon Composer project or app build was fabricated.

Motion and voice should feel encouraging.

The tone is energetic, free, elegant, confident, modern and personal.

Motion

Use 120 ms press feedback and roughly 200 ms small transitions as starting points. Respect Reduce Motion. Keep replay camera travel user-triggered, with visible pause/stop controls; provide a static or crossfade alternative.

Say

Your route, your story. A little further. Saved on this device. Activity paused. Share your progress. Use precise labels for pending, failed and completed actions.

Avoid

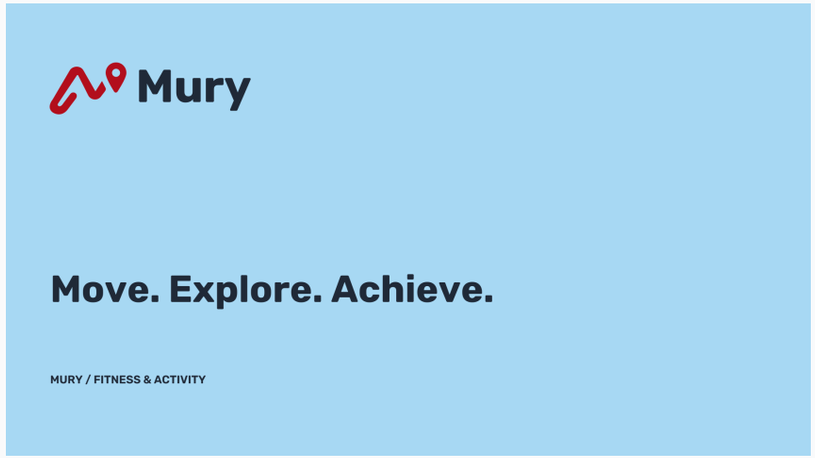

Aggressive guilt-based fitness messages, invented personal records, guaranteed accuracy, claims that planned features are live, or colour-only status communication.

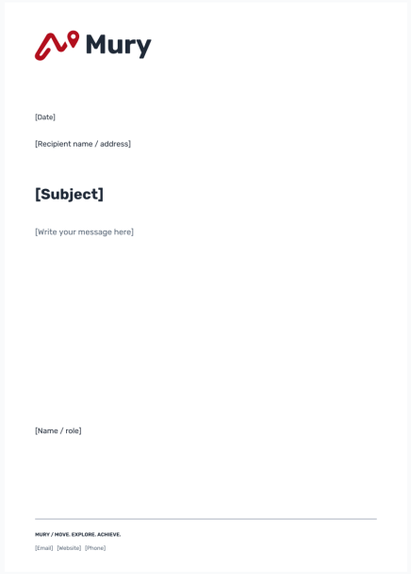

Brand copy

Primary line: Move. Explore. Achieve. Supporting copy can be warmer and specific to the activity. Do not make a new slogan compete with the primary identity in every layout.

The supporting brand toolkit.

Marketing, presentation, stationery and email sources use the same typography and colour rules.

Replace bracketed contact and project fields. Email images must be embedded or hosted; recipients cannot use local file paths. Print colours and trim need a printer proof.

Everything is in the pack.

Use START-HERE.html to browse assets, then keep the source masters and licences with your team.

Files and formats

Outlined SVG logos with transparent PNG, vector PDF and EPS. Editable SVG templates with PNG previews. ICO/ICNS, app catalogs, fonts, ASE/GPL, CSS/JSON tokens and native colour resources. Inventory hashes identify the exact delivery.

Originality and provenance

The symbol is rebuilt from smooth reference-led curves, replacing the rejected trace. Rubik uses its included SIL OFL. Functional icons retain the Lucide/Feather licence. The city image is newly AI-generated concept artwork.

What remains outside this export

Real-device readability, icon import/build, store upload, physical print proof and name/domain/trademark clearance. Do not treat concept layouts or fictional activity values as proof of shipping capabilities.

Implementation handoff

No existing app assets or code were modified. The development team can import this complete pack, map tokens to native components, replace sample screens and verify the actual release.
